EDUCATION

SRI VENKATESWARA COLLEGE OF ENGINEERING(SVCE)

Tirupati, Andhra Pradesh, India

Bachelor of Technology in Computer Science and Engineering (AI & ML)

Graduated: April 2026

Cumulative CGPA: 9.55/10

Relevant Coursework: Data Structures & Algorithms, Database Management Systems, Object-Oriented Programming, Machine Learning, Operating Systems, Computer Networks

PROFESSIONAL SUMMARY

Backend Developer specializing in Java and Spring Boot with hands-on experience in building scalable microservice-based applications. Skilled in Spring Security, REST APIs, Hibernate (JPA), JWT Authentication, Microservices, MySQL, and distributed system architecture. Experienced in implementing secure backend systems, inter-service communication using Feign Clients, and optimizing logistics workflows using Dijkstra's Algorithm. Strong understanding of OOP, Data Structures & Algorithms, Multithreading, and backend software engineering principles.

UNIVERSITY PROJECTS

Smart Warehouse & Order Fulfillment System | [\[Link\]](#)

Tech Stack: Java, Spring Boot, Spring Security, Spring Cloud Gateway, Eureka, Hibernate (JPA), MySQL, Feign Client, JWT, Microservices

- Developed a distributed microservices-based Warehouse Management System with independent services for Authentication, Product, Inventory, Warehouse, Order, and Route Management.
- Integrated Spring Cloud Gateway and Netflix Eureka for centralized routing, service discovery, and scalable communication between services.
- Implemented secure JWT-based authentication and role-based authorization using Spring Security with stateless session management.
- Integrated Dijkstra's Algorithm in the warehouse route management module to compute the shortest delivery paths between warehouses and improve logistics efficiency.
- Applied modular Controller–Service–Repository architecture to improve maintainability and scalability of backend services.

Bank Application — Secure Banking Backend | [\[Link\]](#)

Tech Stack: Java, Spring Boot, Spring Security, Hibernate (JPA), MySQL, JWT

- Built secure RESTful APIs for user management, account handling, transactions, and transaction history modules.
- Implemented JWT-based authentication and role-based authorization for secure and stateless communication.
- Applied BCrypt password encryption and endpoint-level token validation to enhance application security.
- Expanded modular backend architecture using Controller–Service–Repository pattern for improved maintainability.
- Optimized backend operations and API structure for reliable banking transaction management.

EXPERIENCE

AI–Data Analyst Intern | Rooman Technologies

May 2025 – Jul 2025

- Planned and executed data analysis workflows using SQL and Python to automate repetitive data collection tasks, reducing manual effort by 30%.
- Initiated structured data pipelines that improved reporting turnaround time by 25%.

- Expanded KPI dashboards to visualize sales and operational performance, enabling data-driven decisions by stakeholders.

ADDITIONAL

Technical Skills:

- **Languages:** Java, Python
- **Databases:** MySQL, SQL
- **Frameworks & Tools:** Spring Boot, Spring Security, Hibernate, JPA, Maven, JUnit 5, Microservices
- **Backend Technologies:** REST APIs, JWT Authentication, Feign Client, Kafka

Certifications & Training: Data Structures and Algorithms (Java) – Udemy, Machine Learning – Stanford University & DeepLearning.AI (Coursera)
